Biotechnology Engineering
Instituto Tecnológico de Estudios Superiores de Monterrey

2019 - 2021
Master of Science in Biotechnology
Instituto Tecnológico de Estudios Superiores de Monterrey

LANGUAGES

Español - Native
Inglés - Advanced (C1)

SKILLS

- Python
  - Pandas
  - Matplotlib
  - Scikit-learn
- SQL
- PySpark
- Looker Studio
- Cloud SQL (GCP)

ABOUT ME

Analytics professional with a passion for writing clear and concise code. Having a solid foundation in statistics and research experience, I am skilled at turning data into actionable insights that drive business outcomes. I am particularly enthusiastic about expanding my skill set to encompass working with big data on the cloud, specifically focusing on platforms like GCP and AWS.

EXPERIENCE

DATA CONSULTANT

July 2022 - Current position | Minsait
Data Analyst for Training Courses BBVA

- Creation and Maintenance of Dashboard in Looker Studio. For the monitoring of impacts and results of Training Courses for Branch Directors and other staff members.

Flow Value BBVA

- Analytical team focused on processing data of the sales and purchases of financial bonds.
- Data ingestion and transformation using PySpark on Datio.
- Development of Dashboard in DOMO to facilitate the interpretation and analysis of the data.

DATA ANALYST

March 2022 - July 2022 | TATA Consultancy Services
As a data analyst, I have learned about ETL process using SQL Server. While I have also trained to be able to extract information from APIs in python, and generated data pipelines with airflow.

RELEVANT PROJECTS

Radiohead Data Analysis

Using the python library spotipy, you can extract data from the Spotify API. An analysis of the audio features of the Radiohead catalogue was performed using pandas and seaborn for data visualization. Work in progress

Storage and Cleaning of a Kaggle Dataset on AWS

I used Amazon S3 as a Data Lake. To perform data transformation and cleaning, I used AWS Lambda functions. AWS Glue was used to catalogue the data and to create and run ETL jobs. Finally, I used AWS Athena to query and analyze the cleaned data.
